

# Addix launch conductive parts

*Protect electronic circuits from electromagnetic interference. This is the primary function of Silvershield®, electrically conductive parts made from Silicone or fluorinated Silicone developed by Addix.*

These parts are metal loaded with silver, silver plated aluminium, silver plated copper, carbon black, etc... and have been designed for military and aeronautics applications.

Silvershield® can be O-rings, flat gaskets, housing sealing gaskets of any shape and any dimension (moulded or extruded parts).

They are characterized by their low resistivity of up to 0.005  $\Omega$ /cm.

## About Addix

Addix specialize in the design and manufacture of elastomeric components such as parts for connectors, sheets, moulded and overmoulded parts, extruded profiles. These components have been designed for markets such as aeronautics and military, industry, offshore, medical, automotive, domestic appliances, rail, etc...

Addix is a subsidiary of the French group Axon', the manufacturer of high tech cables and advanced interconnect solutions. The consolidated turnover in 2007 amounted to 99 million €.
