

AXON' CABLE offers custom designed mini systems

AXON' combines its know-how and technologies in microwave, connection, special cables, micro-D connectors in order to offer hybrid harnesses which can be directly integrated into customer's systems.

Hybrid harnesses can be made with different configurations of cables and terminated cords, coaxial cords, power cords, signal cords (Ethernet type, IEEE1394, USB2,SATA), fibre optics, spacewire assemblies, etc, for static or dynamic applications.

From the design stage, real using conditions are taken into account: high altitude, extreme temperature (-65°C), dynamic applications (for example, over 100 000 cycles) while maintaining electrical and mechanical performance. In addition to equipment dedicated to EMI measurement, AXON' can achieve specific equipment. They test harnesses in real using conditions, for example dynamic and climatic.

Its expertise in interconnect systems enables the company to offer custom designed twist capsules, AXOTWIST® for radars. They are equipped for example with microwave assemblies and micro D harnesses.

AXON' also offers assemblies equipped with combo D connectors. They are micro D connectors made with micro D contacts and power contacts or micro D contacts and coaxial contacts. AXON' also combines its knowledge in microwave and in micro D to offer harnesses working up to 10 GHz.

About AXON'

The AXON' group specialise in designing and manufacturing high tech conductors, electronic cables and interconnect solutions, for markets such as consumer electronics, telecommunications, computer, automotive, aeronautic, military, medical, space etc.

The headquarters of company is situated in Montmirail in France (100 km east of Paris) and employs 1900 staff world-wide in around 10 subsidiaries (France, Germany, India, Great-Britain, Spain, USA, Japan, China, Hungary, Latvia, Mexico).

Its consolidated turnover amounts to 99 million Euro in 2007. 60 % of sales are achieved in export.
